### Target audience
Master and PhD students in biological science, R&D researchers, engineers, biological science engineer, and others professionals with interest in or involved in biomaterial supply

### Prerequisite
NA

### Objectives
- To better apprehend the challenges facing biopharmaceutical enterprises regarding supply chain
- To understand the specificities of the supply-chain for biomedical products
- To understand the future evolution of logistic

### Content
The specificities of logistic in companies developing cell therapy products
- What are the guidances?
- What are the peculiarities and stakes?
- What are the impacts of logistic on the production of cellular products
- What types of transport are available in Wallonia
- How are notions of risk management integrated into the selection of transportation mode
- What are the challenges on the 2020 horizon and beyond?
- What are the similarities and differences with other sectors or products types

### Méthodology
80% theory + 20% study-case

### Trainer
Franck Toussaint, Director from Biolog Consulting and different expert from biopharma enterprises

### Coordinator
Béatrice GOXE, PhD, Biopark Formation (beatrice.goxe@ulb.ac.be)

---

### Biomaterial Supply Chain in Wallonia: Bio-supply and logistic challenges

**In practice**

**Reference:**

**Location:** Biopark Charleroi

**Duration:** 0.5 day - 100 participants max.

**Schedule:** from 13:00 to 17:00

**REGISTRATIONS**
Biophare: http://www.biophare.eu

---
